# Frontend Developer Code Test

## Setup

1. Download and extract the ZIP file
2. If you don't have PHP installed, install it now, you will need PHP 5.4 or later
3. From the code directory run `php -S localhost:8000`
4. You should be able to access the site in your browser at localhost:8000

## Your Goal

1. Replace the multi-page PHP application with a single page React application
2. Use the REST API to retrieve of update data, the endpoints are as follows:
   - `GET /api/deliveries.php`
     Retrieves all deliveries
   - `GET /api/deliveries.php?id=123`
     Retrieve a delivery for the given ID
   - `POST /api/deliveries.php`
     Create a new delivery
   - `PUT /api/deliveries.php?id=123`
     Update an existing delivery
   - `DELETE /api/deliveries.php?id=123`
     Delete a delivery
   - `GET /api/drivers.php`
     Retrieves all drivers
   - `GET /api/drivers.php?id=123`
     Retrieve a delivery for the given ID
